Smart Budgeting and Financial Goal Management System

UI Wireframe & Screen Specification

Official project name	Smart Budgeting and Financial Goal Management System
Prepared for	Team J
Version / date	Version 1.0 | 8 October 2026

Working draft. Confirm project-specific decisions with the team and supervisor before treating this document as approved.

1. Navigation structure

Suggested signed-in navigation: Dashboard | Transactions | Budgets | Savings Goals | Reports | Settings. The main navigation should remain consistent across desktop and mobile; on narrow screens use a menu or bottom navigation if suitable.

2. Screen inventory

Screen	Main components	Key interactions / states
Registration	Project logo/name, identifier, password, confirm password if used, submit link to sign-in.	Validate required fields, show duplicate identifier and server errors.
Sign in	Identifier, password, sign-in button, registration link.	Invalid credentials message; loading state; successful redirect.
Dashboard	Period selector; income, expenses and net cash-flow cards; budget status; goal progress; category chart; recent transactions; insight card.	Change period; add transaction shortcut; empty state for new user.
Transactions	Income/expense filter, date/category filters, search if approved, record table/list, add button.	Add/edit/delete with confirmation; pagination if dataset grows; empty/error states.
Add/Edit transaction	Type, amount, date, category, optional note, save/cancel.	Client-side feedback plus server validation; avoid double-submit.
Budgets	Budget period/category/limit form; list with used, remaining and overspend indicator.	Create/edit budget; prevent invalid date ranges; explain no-spending state.
Savings goals	Goal cards/list with target, target date, progress and status.	Create/edit goal; add contribution; complete/pause if supported.
Reports	Date range, category breakdown, spending trend, totals and accessible chart labels.	Validate date range; no-data state; values reconcile to transactions.
Settings	Profile/login identifier display, currency preference if supported, sign-out.	Only agreed fields editable; safe password change flow if included.

3. Layout guidance

- Prioritize clarity over visual complexity; money figures and labels should be readable.
- Use the same formatting for currency throughout the system (proposed ZMW).
- Do not rely on color alone to communicate overspending or progress; include text and/or icons.
- Show loading, empty, success and error states on data-driven screens.
- Forms should clearly identify required fields and preserve valid input when a recoverable error occurs.
- On mobile, tables should become compact cards or scroll safely without hiding essential actions.

4. Text wireframes

Dashboard

[Top bar: Project name | Period selector | Profile]\n[Income card] [Expense card] [Net cash flow card]\n[Budget status / category chart]\n[Savings goal progress]\n[Recent transactions] [Smart insight]

Transactions

[Page title: Transactions] [Add transaction]\n[Type filter] [Date range] [Category filter]\n[Date | Type | Category | Amount | Actions]\n[Empty state / pagination]

Savings goals

[Page title: Savings Goals] [Create goal]\n[Goal name | Target | Target date | Progress]\n[View goal] [Add contribution] [Edit status]

Reports

[Page title: Reports] [Start date] [End date] [Apply]\n[Income / Expense / Net summary]\n[Spending by category chart]\n[Spending trend chart]

5. Wireframe approval

These are screen requirements and low-fidelity text layouts, not final visual mockups. Before coding, agree on navigation, required fields, mobile behavior and whether any optional features are included.
